INTRODUCTION

This paper brings together all the botanical articles that have appeared so far in this *Journal* from its very first volume till 1969. It would be useful to any person interested in Indian Botany. Attempt has been made here to present them in a very simple form as an aid to research workers. With a view to keep this lengthy catalogue within a moderate size only one main entry has been given for each article. Although no pain has been spared to maintain bibliographical accuracy, I shall be grateful to readers for detection of omissions and lapses. I am grateful to Miss D. Kanhere for her help in compilation of this catalogue.
